ALSO KNOWN AS

UMA Optimistic Oracle, Optimistic Oracle v3

Overview

UMA's Optimistic Oracle V3 is a general-purpose 'assertion' oracle that lets any smart contract post a claim about the real world onchain and have it accepted unless someone challenges it. A requester submits a data request with resolution instructions, a proposer reward, a bond size and a challenge-period (liveness) duration; a proposer answers and posts a bond, and if nobody disputes during the challenge window the answer settles as correct and the proposer is refunded plus rewarded. Disputers must post their own bond, refundable if they are proven right, and a disputed assertion is escalated to UMA's Data Verification Mechanism, where staked UMA holders vote in 24-hour commit-and-reveal rounds and a resolution requires at least a 65% majority of staked UMA behind one outcome, with slashing and rewards to incentivise honest voting. UMA states that roughly 99.8% of requests settle optimistically without ever reaching the DVM. V3 generalises this into a data assertion framework with pluggable 'Escalation Managers' that let integrators customise who may assert, who may dispute and how disputes are arbitrated, and UMA provides a sandboxed environment for testing the dispute flow. Documented integration patterns include prediction markets, insurance contracts and generic data assertions. Optimistic Oracle V3 succeeded UMA's earlier optimistic oracle versions, replacing the price-request-centric interface with a generic assertion API and adding Escalation Managers for customisable dispute handling.

Within the DeFi Intel graph, UMA Optimistic Oracle V3 connects to 9 tracked entities, most strongly to Polymarket, Risk Labs Foundation, Risk Labs Foundation.

Relations

Top connections in the DeFi Intel knowledge graph (confidence-weighted, 9 of 9 total).

Relation	Connected entity	Confidence
integrates	Polymarket	95%
launched	Risk Labs Foundation	95%
developed	Risk Labs Foundation	95%
secured_by	Across Protocol	95%
issued_by	UMA Protocol	95%
secured_by	Across v3	95%
secured_by	Across Settlement	95%
launched	UMA Protocol	85%
replaces	UMA Optimistic Oracle V2	85%

Frequently asked questions

What is UMA Optimistic Oracle V3?

UMA Optimistic Oracle V3 is an oracle tracked in the DeFi Intel knowledge graph. It is connected to 9 other tracked entities, most strongly to Polymarket, Risk Labs Foundation, Risk Labs Foundation.

What type of entity is UMA Optimistic Oracle V3?

UMA Optimistic Oracle V3 is classified as an oracle (product) in the DeFi Intel knowledge graph.

What is UMA Optimistic Oracle V3 connected to?

In the DeFi Intel knowledge graph, UMA Optimistic Oracle V3 is linked to 9 other tracked entities, most strongly to Polymarket, Risk Labs Foundation, Risk Labs Foundation.
